Excellent Book That Looks At Technology Use In Education In Very New Ways

Well-known for addressing the use of computers to foster critical-thinking and problem solving, this text was written to teach current and future teachers how to better engage learners more mindfully and meaningfully in the process of learning. Available now in its Third Edition, it focuses on how to use technology to support meaningful learning through model building, providing powerful strategies for engaging, supporting, and assessing conceptual change in learners.

My Personal Review:
I think that every teacher would be wise to read this book. It does an excellent job of demonstrating the constructionist principle, and its suggestions for using technology to help students think for themselves and develop new ways of thinking, is very good.

I've read many books on technology and education, and I have taught educators about technology. This has so far been the most intriguing book on the subject, and a book that got me to think outside the box (in a good way), more than any other book on the subject, other than the Problem Solving with Technology book in the same series.
